**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-22 are rejected under 35 U.S.C. 102(e) as being anticipated by Landsman et al. (U.S. Patent 6,317,761).

The Landsman '761 patent discloses a method for storing and viewing Internet advertisements. The method comprises receiving plural Internet advertisements (col. 9, lines 56-58), with at least one Internet advertisement including a tag (col. 9, line 64), and saving (col. 10, lines 12-24) the advertisements at the user computer at least partially based on the tag.

Regarding claims 2-6: The tag is a HTML tag (col. 9, line 64). The Landsman '761 patent discloses that the advertisements are viewed using browser software such as INTERNET EXPLORER or NETSCAPE (col. 16, lines 34-39); thus, the method inherently comprises displaying the button in response to toggled buttons, allowing the user to scroll through the advertisements, and displaying a "previous" and "next" button and accessing the advertisements in response to the toggling of these buttons since these are notoriously inherent functions of the aforementioned browser software. The saved advertisement also has a link to a website, and the website is accessed when the link on the advertisement is toggled (col. 17, lines 27-36).

Regarding claims 7- 19: The Landsman '761 patent discloses a system for accomplishing the above method. The system includes a server (13, 15, 20), a database (15) connected to the server and storing advertisements, and a user computer (5) connected to the server via the Internet. The server transmits the Internet advertisements to the user computer (5). The user computer includes a program ("AdController" – col. 16, lines 56-60) for saving the Internet advertisements at least partially based on the tag. The program ("AdController") includes logic means for receiving and saving the Internet advertisements. As stated above, program utilizes browser software (7) such as INTERNET EXPLORER or NETSCAPE (col. 16, lines 36-39); thus, the program inherently comprises logic means for displaying the button in response to toggled buttons, allowing the user to scroll through the advertisements, and displaying a "previous" and "next" button and accessing the advertisements in response to the toggling of these buttons since these are notoriously inherent functions of the aforementioned browser software.

Regarding claims 20-22: The method of viewing inherently comprises functions of the browser software (7).

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Barnett et al. (U.S. Patent 6,336,099) discloses a method and system for electronically distributing product redemption coupons to personal computers from a central database (see Abstract and Fig. 1). Krishan et al. (U.S. Patent 6,442,529) discloses a method and system for displaying downloaded advertisements on a users computer while the user is waiting to establish

an Internet connection (see col. 3, lines 46-62 and Figs. 7 and 8). Roskowski (U.S. Patent 6,212,554) discloses a method for saving and displaying advertisements on a users computer after the user has completed another task (see col. 8, line 9-64). Mankoff (U.S. Patent 6,385,591) discloses saving and organizing electronic coupons on a user's computer and PDA (see Abstract). McCollom et al. (U.S. Patent 6,343,274) discloses a method for allowing a consumer to subscribe to desired advertisements (see Abstract).
